## CamelCase

New wiki links are automatically created when concatenating capitalized words, such that for example the words 'Camel' and 'Case' concatenated form a link to this [CamelCase](#) page.

CamelCase is the original wiki convention for creating hyperlinks, with the additional requirement that the capital letters are followed by a lower-case letter; hence "AlabamA" and "ABc" will not be links.

### Customizing the Wiki behavior

While Trac remains faithful to the original Wiki style, it also provides a number of ways to accommodate users with different preferences:

- To prevent the creation of a link for the [CamelCase](#) word, prefix the word with an exclamation mark (!): !CamelCase.
- By default a [CamelCase](#) word with no corresponding Wiki page will be rendered as a gray link followed by a question mark. This is useful for example when the [CamelCase](#) style is used to name code artefacts like class names, and a Wiki page is expected to document each class. The behavior can be configured through the [\[wiki\] ignore\\_missing\\_pages](#) option in [TracIni](#).
- To automatically insert space characters between the words of a [CamelCase](#) link when rendering the link, enable [\[wiki\] split\\_page\\_names](#) of [TracIni](#).
- Creation of explicit Wiki links is also easy, see [WikiPageNames](#) for details.
- Wiki formatting can be disabled completely in some places, for example when rendering commit log messages. See the [\[wiki\] wiki\\_format\\_messages](#) option in [TracIni](#).

See [TracIni](#) for more information on the available options.
